

$$3 - 5 = \underline{-2}$$

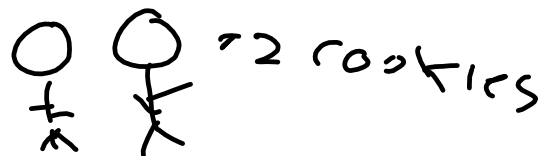

counting down from 3 to -2
by 3, 2, 1, 0, -1, -2
-1 -2 -3 -4 -5

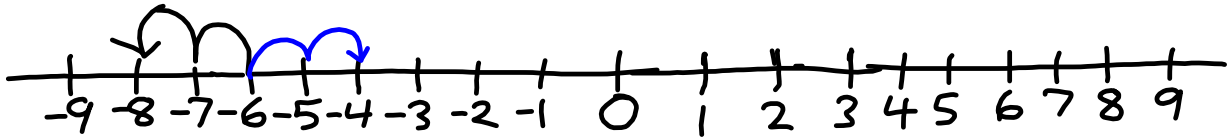

$$3 - 5 = \underline{-2}$$

because the
numbers that are not
equal can be negative.

$$-6 - -2 = \underline{-8} -4$$

$$6 - 2 = 4$$
$$-6 - (-2) = -4$$

$$-6 - -2 = \underline{-8} -4 - -2 =$$

I thought I had to subtract.
I had added.
 $6 + 2 = 8$
 $-6 - -2 = -8$

$$-2 + \underline{6} = 4$$

$$2 + 4 = 6$$

$$-2 + 6 = 4$$

negative pushes
to positive. -2
you need 6.

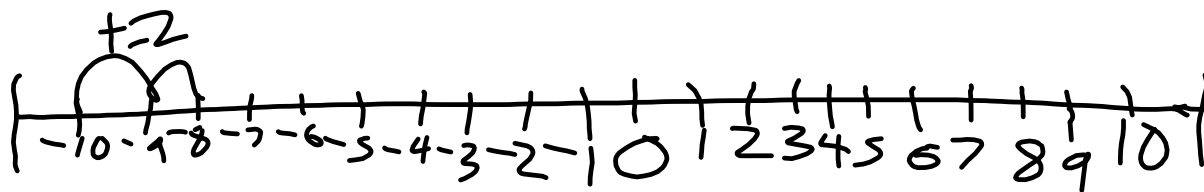

$$-2 + \underline{2} = 4$$

6

Because $2 + 2 = 4$
and two numbers that are
the same equal a positive number.

$$\underline{-8} + -2 = -10$$

$$8 + 2 = 10$$
$$-8 + (-2) = -10$$

$$\underline{\quad} + -2 = -10$$
